

going to CD-ROM not only reduces distribution costs (CDs are cheaper than multiple floppies) but also allows distribution of several products, support files and documentation on a single medium. NetShield provides protection for NetWare 3.11, 3.12, 4.X, and SFT III. Like many anti- ***virus*** products, McAfee requires patching of NetWare 3.11 and 3.12 servers: in fact, the recommended versions of A3112.NLM, AFTER311.NLM and NWSNUT.NLM are 4.10A, the highest seen so far.

TI MIMESweeper 2.0 ***SMTP*** [anti- ***virus*** add-on].

AB Last year, Integralis released MIMESweeper, which was basically an anti- ***virus*** add-on which made use of your existing scanning software to protect your system from any nasties carried by internal e-mail. It was available in versions for Microsoft Mail and cc:Mail (a version for Novell GroupWise has now been added), but until recently it didn't protect you against the main source of viruses: external e-mail. This has now been remedied by the release of a version for ***SMTP*** (Simple Mail Transport Protocol), the main protocol used for Internet mail. However, it should be noted that the product cannot protect you from that other external threat, viruses contained in files that have been downloaded from Web pages or by using FTP (although it will work on mail coming in via Netscape, or any other POP3 client such as Microsoft Exchange). For general Web protection, a product like McAfee's WebScan is required.

TI NetShield (Anti- ***virus*** product).

AB Sooner or later it had to happen: not only has McAfee's NetWare ***virus*** protection solution (NetShield) been extended to include new functionality and features, but version 2.2 also ships on CD-ROM. McAfee has always used shareware and the public domain distribution network (BBSs, computer networks, ***FTP*** sites and specialised dealers) to provide a "try before you buy" product:
